## 1. Introduction

This report is an elaboration of deliverable D.T2.1.1, in which several simple IoT water level meters for flood warning have been implemented. For each location, there is an image of the site, photos of the meter including the Interreg sticker, and a screenview of the portal.

The water level data are collected in a portal of Waterschap Limburg.

### Disclaimer

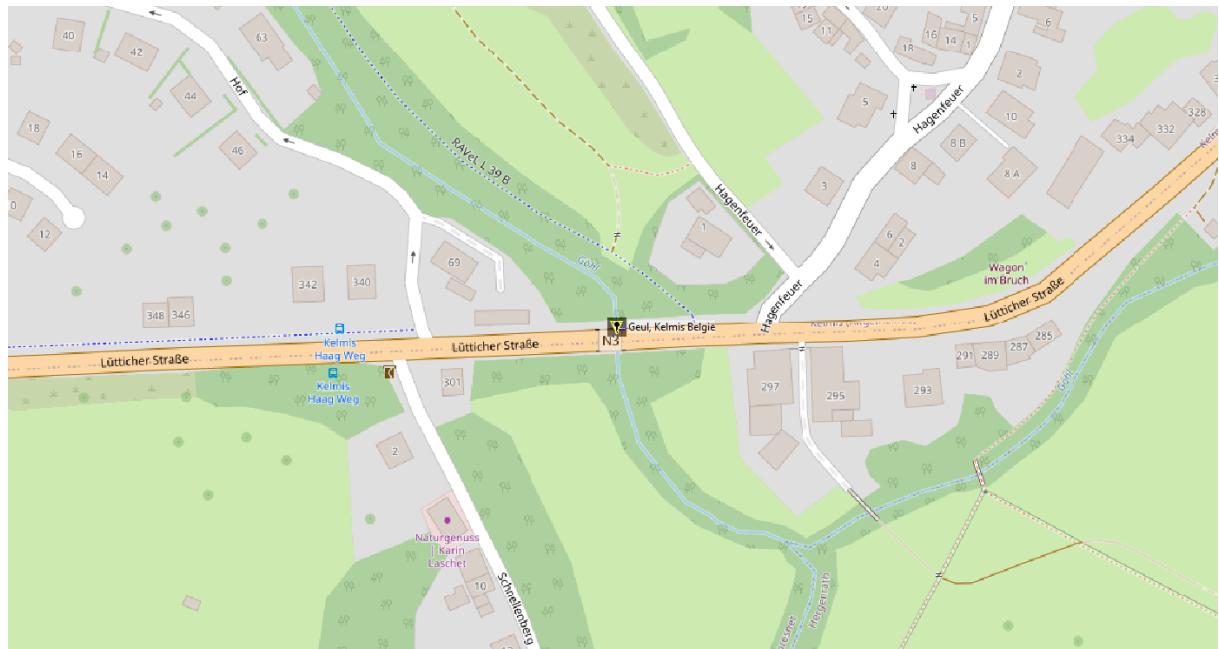

***The EMfloodResilience project is being carried out within the context of Interreg V-A Euregio Meuse-Rhine and is 90% funded from the European Regional Development Fund.***
